Career Objective

Young and passionate software Engineer who is always there for learning and to take responsibility. Now, looking for a job in order to polish my web skill and became familiar with the industry environment. With the handful number of skill in the app development with (Flutter) web development such as (ASP.net,react, node, mongo, django, nest js) as well as comprehensive knowledge of programming (including OOP) and data structure in (C++ and python) and projects on docker and kubernetes. Additionally, I have a keen interest in Machine Learning (ML) and its applications. Furthermore with the decent writing and communication skill now seeking an opportunity to prove myself a valuable asset for that organization.

Experience

Algorithm Consulting — **Junior Software Engineer** — **Sep 2024- Present**

- Developed and maintained ASP.NET Web Forms utilizing Telerik and Web API applications for a wind monitoring SaaS project.
- Designed and implemented automation solutions to optimize processes and improve system efficiency.
- Worked extensively with SQL Server, including writing and optimizing stored procedures.
- Configured and deployed applications using IIS and Server Manager.
- Integrated KEPServerEX for real-time industrial data communication.

Easy Steps Solutions — **Junior Full-Stack Dev** — **Apr 2024- Sep 2024**

- Developed a vehicle ERP system using Flutter for the front end and Django for the backend.
- Designed and implemented core ERP features, enhancing operational efficiency.
- Contributed to the chatbot application, building the React front-end for a seamless user experience.

Projects

Anomaly Detection

POS Anomaly Detection

POS anomaly detection is an ML project that utilizes ML algorithms including Random Forest, Isolation Forest, and HDBSCAN. The project is developed using Python with ZEML and integrated with Django.

Smart Gas

Cross Platform Flutter Application

full stack flutter app for android and ios with map,qr scan,google login , responsive for any loyout and screen
repoLink: **https://github.com/EC-Paid-Project/Flutter-App**

Cricket Analysis

WC2023 Analysis Using PowerBI and Python

Utilizing the latest World Cup 2023 data, the project employs Power BI to analyze player statistics. Selenium and Bright Data are utilized for web scraping, while data processing is conducted using Jupyter Notebook .repoLink:https://github.com/mohib988/worldcup2023Analytics

Internship website

Mern Stack Application

Full Flash Mern Stack website with redux,jwt token and much more.

Load Balancing / Auto-Scaling

Load Balancing / Auto-Scaling Via Kubernetes

Load balancing traffic among Pods. Autoscaling adjusts Pod count based on demand. Benefits include high availability, scalability, cost efficiency, improved performance, and fault tolerance
